Full Stack Developer building and shipping production software since 2025. I have delivered four live platforms — a multi-tenant real-estate CRM and three EdTech products used by school students, UPSC aspirants and working professionals. I work end to end — React, Node.js/Express APIs, MongoDB — and run production myself on AWS with Nginx, PM2 and Razorpay payments.

4 platforms live in production

100% self-deployed on AWS

3 products with live payments

15+ technologies across the stack

EXPERIENCE

Freelance Full Stack Developer · AcreLoop CRM

Jun 2026 — Present

- **Sole developer** of AcreLoop, a multi-tenant CRM for real estate organisations — architecture, delivery and production ownership.
- Built the modules a sales team lives in daily: lead management, follow-up tracking, activity history and sales workflow.
- Implemented **role-based access control** and per-tenant data isolation so each organisation only ever sees its own leads, users and reports.
- Shipped analytics and reporting dashboards covering conversion, team performance and pipeline activity.
- Own the production stack on **AWS EC2** — Nginx reverse proxy, PM2 process management, environment/secret handling and deployments.

React · Tailwind CSS · Node.js · Express · MongoDB · AWS EC2 · Nginx · PM2

Full Stack Developer · EdTech Company

Jan 2025 — Jun 2026

- Developed and maintained **three production learning platforms** — Gyankosha (school students), AEP Gyankosha (UPSC aspirants) and Business Wisdom Gyankosha (MBA students and working professionals).
- Integrated **Razorpay** for online payments, course enrolment and transaction handling across all three platforms.
- Designed scalable REST APIs, MongoDB schemas and the business logic behind courses, enrolments and content delivery.
- Built authentication, authorisation and user-management systems with role-based content access, and worked with product teams to scope and ship new features.
